

Facilities Inventory and Condition Assessment Analysis Program

The Passaic Valley Sewerage Commission (PVSC) is performing inspection and evaluation of its Main and Branch Interceptor Sewers, which include over 35 miles of sewer and 5 miles of Outfall Tunnel. The work will generate recommendations and designs to correct and improve observed deficiencies. Following the evaluation, PVSC anticipates up to nine (9) construction projects for cleaning and rehabilitation of the system.

The program will run for 7 years through approximately 20 municipalities in the Commission's service area. While the program is ongoing, this website (<https://www.pvscsewers.com/>) will be the main resource for public information, including project tracking and updates.
